Property Description

This beautiful 3 bedroom, 2.5 bath home, sits on 4.24 acres overlooking the Pacific Ocean with verdant farmlands and a bucolic river valley in between. Surrounded by nature and rainforest in a secure gated community just over four miles from the main coastal highway, this home was designed by famed architects Pietro Stagno Ugarte and Luz Letelier Bellalta, to take advantage of the natural beauty of the jungle, ocean and river valley views, while also offering every modern comfort, with custom built furnishings, beautiful teak floors, granite countertops, high end appliances, private balconies for every room, and a master bedroom en suite bath with his and her sinks and a bidet. This spacious 2,475 square foot house was nicknamed Casa Dos Aguilas, Two Eagles Home, by the owners when they spotted two eagles while sitting on the property before the house was built. Featured in Su Casa Magazine, the home's design does have the impression of an eagle's nest way up high in the jungle canopy, along with the feel of an eagle's wings spreading wide with its two distinct upper level spaces.
